Lab 13

Part B

B1 : Count() = 0

Any() = False

Average() throws exception due to empty list

B2: prints "2 3 1 4" the four distinct YearOfStudy values in the ORDER they first appear in the list

B3 : q is a deferred query (Where), so it is not evaluated until Count() is called. By then "Test Person" (YearOfStudy = 3) has been added
